

## File Upload by Attendee Wireframe Mockup

### 1. General position on assignment page:

The submission block will be where this feature resides, the current goal is for the submission 'window' to be modular enough to be nested into whatever structure we end up with for the assignments.

### 2. Mockup for actual submission block

Assignment # / Module / etc	
EITHER summary of assignment OR list uploaded files here	
Upload File(s)	Submit

Objective here is simplicity, this window will just be default present on the turn-in page and provide an option for file browsing/upload and a submit button. The 'Upload File(s)' button will present the native file browser for file selection.

### 3. Confirmation upon 'Submit'

Just a general 'Success' or 'Failure' prompt upon submission to let the user know whether they need to repeat the process or can stop. A pop-up strikes me as the most straight-forward way of giving confirmation but a less intrusive notification could definitely work as well.
